## **VIDA version 2012D will require at least 3Gb of RAM**

**Issue # 130**

While the VIDA 2012C version will be released in mid September, it is important that all VIDA users be made aware of the computer RAM requirements that will be necessary to run the 2012D version.

### **Background:**

VIDA 2012D will require at least 3Gb of RAM be available on the computer in order to install VIDA All In One

VIDA version 2012D is planned to be released early November 2012.

Ensure, before this time, that computer hardware used for VIDA All In One has at least 3Gb of RAM. If you don't meet that criteria, the VIDA setup will be aborted and you will not be able to install 2012D.
